

Put your business on centre stage with EOH LogisticsIT

In today's fast paced world, the convergence of manufacturing and technology have become global in scale, contributing enormously to the formation of new markets, sustainable growth and economic prosperity. Keeping abreast with the latest in technology and modernising manufacturing processes has become crucial to the future growth of every economy.

EOH LogisticsIT understands this all too well. The company's Project Manager, Marc Seymour, says that the need for informed, intelligent and swift decision making has reinforced the need for advanced methods in the control, collection and management of information from the shop floor.

He explains that EOH LogisticsIT forms partnerships with clients who are intent on improving their productivity and reducing costs and lead times, enabling them to capture and use real-time data and decision making tools. "Our value offering is achieved through the successful combination of expert knowledge and years of experience in the fields of scanning and bar coding, process modelling, warehouse management, planning, forecasting and ERP technologies."

Having successfully implemented numerous solutions ranging from shop floor data collection, stock control, warehouse management and material movement tracking and control, the company's team is fast becoming the leader in manufacturing and logistical IT solutions in the Western Cape.

EOH LogisticsIT monitors industry change, technology enhancement and individual business needs to ensure each client, or rather partner, is equipped with a roadmap to ensure they are up to speed and as economically competitive as their strongest rival. "It is our intention to develop lifelong partnerships with our clients by ensuring they have, and are always aware of, the latest manufacturing and logistical processes, methods and technologies available," says Eduard le Roux, Principal Consultant, EOH LogisticsIT.

"We understand that any change in operational procedure is stressful and can result in enormous costs, a decline in motivation and time delays, if not planned and executed correctly. Effective planning, accurate off-site prototyping, simulation testing and relevant internal training through EOH LogisticsIT ensures minimum on-site implementation, hindrance and down time. The result is a business which is equipped, up to date, competitive and operational without delay and which is able to realise

returns on investment from day one.”

To find out how EOH LogisticsIT can add value to your business and client experiences, contact Marc Seymour on 021 505 6800 or visit <http://logistics.ct.eoh.co.za>
