November 2008

FOR IMMEDIATE RELEASE

A Cut Above The Breast – JF Equipments Automatic Cut-Up Machine.

The automatic controlled system of the JF Equipment's Automatic Cut-Up Machine with individual scanning of each product, combined with a high-speed cutting blade, gives you the greatest accuracy in portioning of chicken on the market.

The JF Equipment Automatic Cut-Up Machine is an advanced high-speed dual lane portion cutter designed for high portioning capacity of fixed-weight or length specific Poultry products. The Automatic Cut-Up Machine design uses a high-speed automated system to maintain very high accuracy – and still provide a top performance with up to 500 cuts per minute.

The Automatic Cut-Up Machine is more than just a very fast accurate portion cutter; it is also extremely flexible in use and only takes seconds to switch the knife set back and forth between the different cutting angles. This also makes it easier to achieve the natural look on products such as fixed weight chicken breasts.

"Customers nowadays request more and more specialised machinery capable of handling their specific needs and the trend in the portion cutter area is that customers increasingly ask for complete solutions and concepts," says Pat Young, Sales Director for JF Equipment.

.../.

Some of the benefits of the JF Equipment's Automatic Cut-Up Machine are as follows

- Maximum profit due to fast payback
- Compact design saves space in the production
- High productivity due to very fast portioning
- Extremely fast cutting speed – multiple cuts even on small products
- Minimised giveaway and best possible yield due to high accuracy
- 45-degree cutting angle capability
- Maximum flexibility – easy to use with different types of products and cutting angles
- High level of hygiene with easy cleaning.

Fresh poultry fillets and butterflies can be cut into perfectly shaped fixed weight products. Switching between different shapes and sizes is an easy quick procedure that takes less than 30 seconds. JF Equipment is South Africa's leading poultry orientated manufacturer of poultry processing machinery and is consistently leading the way in advanced processing technology. JF Equipment will be taking orders for the Automatic Cut-Up Machine from 2009. For more information on the products currently on offer from JF Equipment visit www.jfequipment.com.
