Beele Engineering New Website

Aalten, The Netherlands, July 2019 - Beele Engineering has fully renovated and expanded its website www.beele.com. The company, a market leader in the field of innovative, fire-resistant and gas, smoke and watertight sealing systems, thereby presents itself as expert in the field of sealing technologies.

The involvement of Beele Engineering in its client's problems and the drive to offer ready-made solutions to their issues, converge in our passion and mission: We Care - We Solve. This is also evident in our new website in which the guiding principles consist of the daily application of Beele products by visitors from the construction industry, all branches of industry, and from the shipping and offshore sectors. They can now find their way more quickly to the desired application or selected products and systems.

Beele Engineering's products and systems are applied in various ways, including as fire-resistant, gas, smoke or watertight solutions for cable and pipe transits, gaskets, joint sealants, insulation and coatings. The different products are carefully matched to these applications and guarantee the safety of people and resources – not only on paper but also when it really matters.

A clear description, as well as the key characteristics of each product are posted. Available documentation, such as installation instructions, can be downloaded for each product. In addition, videos in the form of installation videos can be viewed here.

About Beele Engineering

Beele Engineering, in Aalten in the Netherlands, specialises in solutions for the fire-resistant, gas-tight, smoke-proof and water-tight sealing of pipe and cable transits. The company has its own R&D centres, test facilities, one of the most modern and comprehensive production

centres in Europe, and high-quality logistics. This means that customers can be served with standard products quickly and smartly, but customised solutions can also be created for every specific wish. Beele Engineering is currently taking the next step in its 45-year existence with the development and construction of Sealing Valley, the worldwide centre for sealing technology.
